FOREIGN REPORTS.

BELGIUM.

Liege—Control of Hookworm Disease (*Ancylostomiasis*).

In 1903 a hospital was opened at Liege for the special treatment of coal miners in the Liege district suffering from hookworm infection. During the 10 years from that date to the present year 186,040 specimens of dejecta have been analyzed, and 8,898 sufferers from hookworm have been treated at the hospital. A considerable decrease in the percentage of infection has been noted in the district; from 23 per cent in 1902 it fell to 2 per cent in 1912. While formerly one workman in four was infected, at the present time only one in fifty is reported to be suffering from the disease. The large coal mines at Ans and Montegnee, which were the most seriously affected at one time, 50 per cent of the personnel being affected, are at present practically free from the disease.
